ADIA CYBER & INFORMATION SECURITY ISO 27001 CERTIFICATION PROGRAM

Delivered via the ADIA Academy

An 8-Module journey to prepare your company for certification

---

Background

The **Australian Government 2023–2030 Australian Cyber Security Strategy** is now underway and will impact every business in Australia. ADIA's **ISO 27001 certification program** is designed to support member organisations on their journey towards compliance with the ISO 27001 standard – meeting the emerging information security business needs for the research, data and insights industry.

Why ISO 27001: 2022?

ISO 27001 helps organisations become risk-aware and proactively identify and address weaknesses.

In the context of business credibility, ISO standards have a global reach. For those who choose to be independently audited and certified to ISO 27001, it provides an unequivocable measure of Information Security risk management, cyber-resilience, privacy compliance and operational credibility worldwide.

ISO 27001 also dovetails with the ISO 20252 industry standard to ensure maximum cyber security and minimal duplication of systems and effort.

The ISO 27001:2022 Certification Program

This program helps you manage your cyber security risk by preparing your organisation for certification to the ISO 27001 standard[1].

ADIA provides a tailored market research program delivered via the ADIA Academy over eight modules.

Each module comprises of:

- A slide presentation overview at the start of each module.
- Advice and guidance including material templates.
- Draft policies, templates and forms.
- Training and awareness material.
- Desktop audit ready checks and internal audit tools.

[1] The ADIA Certification Program **does not include the cost of certification to the ISO 27001 Standard**.
